SFM 7600

Exploration Support Platform

01.

CED SFM7600 OVERVIEW

Designed for Fast Field Deployment

The CED SFM7600 is a specialised exploration support and logistics platform engineered to transport critical drilling supplies, equipment, and operational resources into remote and underground mining environments. It combines heavy-duty payload capacity with the mobility of the CED 6x6 platform for efficient field support operations.

The system is built for:

- Transporting drilling support equipment and consumables
- Remote and underground exploration logistics operations
- Fuel, water, and compressor transport to drill sites
- Supporting active drilling rigs in remote environments
- Rapid mobilisation of field support resources
- Operation in confined and difficult-access mining areas
- Customisable modular support configurations

02.

BUILT FOR FIELD PERFORMANCE

1 Drilling Capability

The SFM7600 is a high-capacity support platform capable of transporting up to 4,000 litres of water or diesel, as well as compressors, tooling, and exploration support systems. It is designed to deliver essential resources directly to active drilling locations.

2 Operational Efficiency

Built on the CED 6x6 Toyota Land Cruiser platform, the system provides exceptional off-road mobility, fast deployment, and reliable access to remote and underground sites. Its compact design reduces logistical complexity while maintaining high payload capability.

3 Applications

- Exploration drilling support logistics
- Fuel and water delivery to drill sites
- Compressor and tooling transport
- Underground mining support operations
- Remote field operations and resupply
- Mine development support activities
- Mobile exploration service vehicle
- Custom support module deployment
