SFMTS

Exploration Support Trailer System

01.

CED SFMTS OVERVIEW

Efficiency Where It Matters Most

The CED SFMTS is a heavy-duty trailer-mounted exploration support system designed to extend the capability of the CED SFM platform range in remote mining and drilling environments. It provides flexible transport of essential drilling supplies, equipment, and support systems to active field operations.

The system is built for:

- Transporting drilling consumables and tooling
- Supporting remote exploration and drilling operations
- Water, diesel, and compressor transport systems
- Mobile exploration service and support modules
- Rapid mobilisation of field logistics resources
- Extended operational range for drilling programs
- Custom trailer-mounted support configurations

02.

BUILT FOR FIELD PERFORMANCE

1 Support Capability

The SFMTS is engineered for demanding exploration environments and supports up to 3 tonnes of towing capacity. It can be configured to transport water, fuel, compressors, tooling, and a wide range of drilling and exploration support equipment.

2 Operational Efficiency

Designed to integrate with the CED 6x6 Toyota Land Cruiser platform, the SFMTS improves logistical efficiency by extending payload capacity and reducing resupply frequency. Its rugged trailer design ensures reliable performance in remote, harsh, and off-road conditions.

3 Applications

- Exploration drilling support logistics
- Water and fuel transport systems
- Drilling consumables and tooling transport
- Mobile service and maintenance support
- Remote field operations
- Underground and surface drilling support
- Modular exploration logistics systems
- Mine site support operations

**Built
for uptime**
